Deliver up to 1,200 psi high-pressure cleaning power with the industry-best 25HP CAT 3535 pump

KONDOR®

Built to Fit Your Bay, Budget & Business

One look at the Kondor® touchless in-bay automatic's innovative design tells you that it's a gamechanger. With installation options for nearly every bay size, the Kondor line is a sure fit for both new and existing bays. Choose from one- or two-arm models, along with extra service options and appearance upgrades to captivate customers and satisfy your budget.

Lighting the Way to Increased Throughput

Both the one-arm and two-arm Kondor models offer our patented LED Navigation System™. GREEN, BLUE, and RED lights on the Kondor manifolds and available DryLite® dryers visually communicate to your customers when to pull forward, back up, or stop. This enables your customer to achieve proper positioning, which facilitates faster loading and increased throughput.

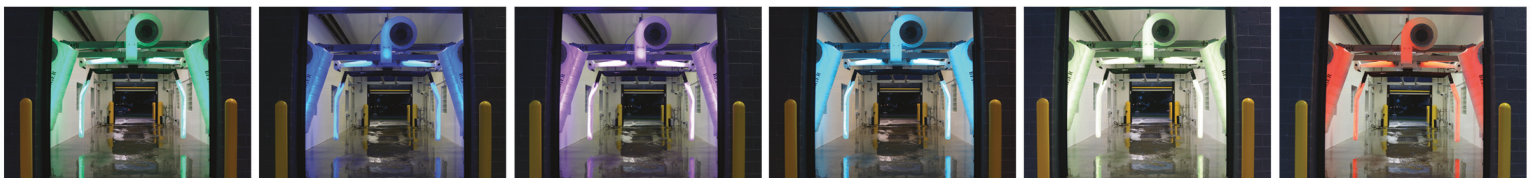

A Welcoming Experience

The ultra-compact carriage head creates an inviting and clear bay to boost your customers' comfort and confidence. All Kondor models feature narrow overhead rails that form an 'inverted runway'—along with a treadle-free design—to help customers get into a straight position with ease. An additional feature of the two-arm Kondor model is its 'field goal post' shape that helps drivers center their vehicles quickly and safely. Plus, the Kondor can wash large dually trucks, which considerably expands your potential customer base.

Setting Your Wash Apart

The Kondor's patented Active Site Marketing® option features LED-enhanced triple-foam wing covers and wash arms that cycle through 6 colors. This attracts customers off the street and onto your site, and brings them back again. Also available are color-changing DryLite dryers that turn your exit into a 24/7 beacon to promote your business, reach more customers, and deliver an unprecedented end-to-end wash experience.

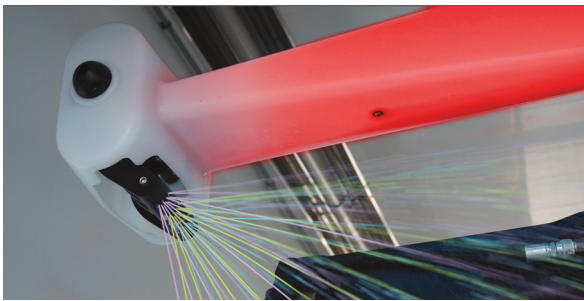

Total Control

The Kondor puts the control in your hands with remote access capabilities, including adjustable wash speeds, customizable menu packages, resettable faults, diagnostics, and email notifications. With remote access, anything that can be done from an operator console can be done from a PC or mobile device anywhere in the world. Industry-leading controls and software offer the programming flexibility of 2 sets of 4 wash packages—8 total. VFD motor controls let you distinctively control the speed of every movement—of each pass on every wash package—for an entirely customizable setup.

Premium Cleaning Power

Every Kondor features the 25HP CAT 3535 pump, which delivers up to 1,200 psi of high-pressure cleaning power. The Kondor's solution delivery options can provide presoaks and waxes using either injectors or chemical pumps. Other application options include triple foam, spot-free rinse, additional waxes, and bug spray for ultimate marketing flexibility.

Maximum Uptime

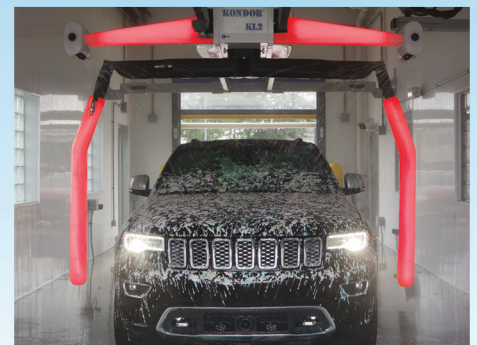

Standard Auto-Resetting Breakaway Arms reset themselves without intervention to keep you washing, increasing your uptime while saving labor time, costs, and frustration. When a vehicle strike occurs, the Kondor arms give way and automatically begin the reset process, which decreases the risk of vehicle damage. Furthermore, the premium parts and components used to manufacture the Kondor deliver long-term durability and repeatable performance while maximizing your profitability.

Available DuraBlaster® CF high-pressure cleaner removes soils & snow from wheels & rocker panels

Installation flexibility to install the Kondor in virtually any new or existing bay

Flexible programming & chemical applications with VFD control to tailor & enhance your cleaning performance

LIGHT The Way To Attract More Customers

LED Navigation System™

(Drive Forward)

(Back Up)

(Stop For Wash)

LED Navigation System™

Illuminated wash arm(s) with color-changing LEDs flash **GREEN** to visually direct customers to drive forward, **BLUE** to reverse, if necessary and **RED** to stop for washing. This patented technology helps drivers quickly and confidently position their vehicles in the wash bay.

*Included With Trim Level D
Kondor® KL2 With Trim Level D Shown*

Optional Active Site Marketing® — Wings & Arm(s)

Active Site Marketing® —

LED-enhanced wings and wash arm(s) display six revolving colors between wash cycles to attract customers off the street and into your bay.

TRUSTED SINCE 1969

Whether you're a seasoned car wash operator or a first-time investor, one thing is true: the equipment you select for your wash will have a major impact on your businesses' success.

Your equipment needs to clean cars the way your customers want to wash their cars.

The equipment you choose should work to support your marketplace's washing preferences, meeting the needs of your customers, and your business, at your location.

As a full-line equipment manufacturer, Belanger makes more types of vehicle washes than anyone else – including conveyORIZED tunnels, touchless and soft-touch automatics, drive-thru and large vehicle washes.

Which means we'll work with you on the best format for your location's success – not push a 'one size fits all' approach.
